

Inserted extract from CBP “Interim Implementing Instructions” (USMCA) CBP Publication # 1082-0420 follows:

Certification or Other Document Requirements An importer may submit an importer, exporter or producer certification. The importer is responsible for exercising reasonable care concerning the accuracy of all documentation submitted to CBP.

The importer may make a claim for preferential tariff treatment based on a certification of origin completed by the importer, the exporter or the producer, for the purpose of certifying that a good qualifies as an originating good.

If an exporter that is not the producer of the good certifies the origin of the good, the certification may be completed by the exporter on the basis of either: (1) having information, including documents, that demonstrate that a good is originating; or (2) reasonable reliance on the producer’s written representation that the good is originating.

If a producer or an importer certifies the origin of the good, the producer or importer must have information, including documents that demonstrate that the good is originating.

The certification need not be in a prescribed format; it may be provided on an invoice or any other document, except a commercial document issued in a non-Party, may be submitted electronically, and may cover a single importation or multiple importations of identical goods within a maximum 12-month period. The certification must contain a set of minimum data elements as set out in Annex 5-A of the Agreement (Appendix III of these Instructions) that indicate that the good is both originating and meets other applicable requirements.

The certification may be submitted in English, Spanish, or French. If submitted in Spanish or French, CBP may request an English translation.

An importer is required to have a valid certification of origin in its possession at the time the USMCA preference claim is made. If the certification of origin is illegible, is defective on its face, or is incomplete, the importer is granted a period of not less than five working days to provide a copy of the corrected certification of origin.

A certification is not required for importations valued at \$2,500 or less, provided that the importation does not form part of a series of importations that may reasonably be considered to have been undertaken or arranged for the purpose of evading U.S. laws, regulations, or procedures governing claims for preferential tariff treatment. If the Center of Excellence and Expertise (Center) Director determines that an importation described in this section is a part of a series of importations carried out or planned for the purpose of evading compliance with certification requirements, the importer may be required to submit a copy of the certification.

- (a) wholly obtained or produced entirely in the territory of one or more of the Parties, as defined in Article 4.3 (Wholly Obtained or Produced Goods);
- (b) produced entirely in the territory of one or more of the Parties using non-originating materials provided the good satisfies all applicable requirements of Annex 4-B (Product-Specific Rules of Origin);

 - (ii) one or more of the non-originating materials provided for as parts under the Harmonized System used in the production of the good cannot satisfy the requirements set out in Annex 4-B (Product-Specific Rules of Origin) because both the good and its materials are classified in the same subheading or same heading that is not further subdivided into subheadings or, the good was imported into the territory of a Party in an unassembled or a disassembled form but was classified as an assembled good pursuant to rule 2(a) of the General Rules of Interpretation of the Harmonized System; and
 - (iii) the regional value content of the good, determined in accordance with Article 4.5 (Regional Value Content), is not less than 60 percent if the transaction value method is used, or not less than 50 percent if the net cost method is used;

and the good satisfies all other applicable requirements of this Chapter.

Article 4.3: Wholly Obtained or Produced Goods

Each Party shall provide that, for the purposes of Article 4.2 (Originating Goods), a good is wholly obtained or produced entirely in the territory of one or more of the Parties if it is:

- (a) a mineral good or other naturally occurring substance extracted or taken from there;
- (b) a plant, plant good, vegetable, or fungus, grown, cultivated, harvested, picked, or gathered there;

- (ii) used goods collected there, provided the goods are fit only for the recovery of raw materials; and
- (k) a good produced there, exclusively from goods referred to in subparagraphs (a) through (j), or from their derivatives, at any stage of production.

Article 4.4: Treatment of Recovered Materials Used in the Production of a Remanufactured

Good

1. Each Party shall provide that a recovered material derived in the territory of one or more of the Parties is treated as originating when it is used in the production of, and incorporated into, a remanufactured good.
2. For greater certainty:
 - (a) a remanufactured good is originating only if it satisfies the applicable requirements of Article 4.2 (Originating Goods); and
 - (b) a recovered material that is not used or incorporated in the production of a remanufactured good is originating only if it satisfies the applicable requirements of Article 4.2 (Originating Goods).

Article 4.5: Regional Value Content

1. Except as provided in paragraph 6, each Party shall provide that the regional value content of a good shall be calculated, at the choice of the importer, exporter, or

producer of the good, on the basis of either the transaction value method set out in paragraph 2 or the net cost method set out in paragraph 3.

2. Each Party shall provide that an importer, exporter, or producer may calculate the regional value content of a good on the basis of the following transaction value method:

$$RVC = (TV - VNM) / TV \times 100 \text{ where}$$

RVC is the regional value content, expressed as a percentage;

TV is the transaction value of the good, adjusted to exclude any costs incurred in the international shipment of the good; and

VNM is the value of non-originating materials including materials of undetermined origin used by the producer in the production of the good.

3. Each Party shall provide that an importer, exporter, or producer may calculate the regional value content of a good on the basis of the following net cost method:

$$RVC = (NC - VNM) / NC \times 100 \text{ where}$$

RVC is the regional value content, expressed as a percentage; NC is the net cost of the good; and

VNM is the value of non-originating materials including materials of undetermined origin used by the producer in the production of the good.

4. Each Party shall provide that the value of non-originating materials used by the producer in the production of a good shall not, for the purposes of calculating the regional value content of the good under paragraph 2 or 3, include the value of non-originating materials used to produce originating materials that are subsequently used in the production of the good.
5. Each Party shall provide that if a non-originating material is used in the production of a good, the following may be counted as originating content for the purpose of determining whether the good meets a regional value content requirement:
 - (a) the value of processing of the non-originating materials undertaken in the territory of one or more of the Parties; and
 - (b) the value of any originating material used in the production of the non-originating material undertaken in the territory of one or more of the Parties.

6. Each Party shall provide that an importer, exporter, or producer shall calculate the regional value content of a good solely on the basis of the net cost method set out in paragraph 3 if the rule under the Annex 4-B (Product-Specific Rules of Origin) does not provide a rule based on the transaction value method.
7. If an importer, exporter, or producer of a good calculates the regional value content of the good on the basis of the transaction value method set out in paragraph 2 and a Party subsequently notifies the importer, exporter, or producer, during the course of a verification pursuant to Chapter

5 (Origin Procedures) that the transaction value of the good, or the value of material used in the production of the good, is required to be adjusted or is unacceptable under Article 1 of the Customs Valuation Agreement, the exporter, producer, or importer may then also calculate the regional value content of the good on the basis of the net cost method set out in paragraph 3.

8. For the purposes of calculating the net cost of a good under paragraph 3, the producer of the good may:

- (a) calculate the total cost incurred with respect to all goods produced by that producer, subtract any sales promotion, marketing, and after-sales service costs, royalties, shipping and packing costs, and non-allowable interest costs that are included in the total cost of all those goods, and then reasonably allocate the resulting net cost of those goods to the good;
- (b) calculate the total cost incurred with respect to all goods produced by that producer, reasonably allocate the total cost to the good, and then subtract any sales promotion, marketing, and after-sales service costs, royalties, shipping and packing costs, and non-allowable interest costs that are included in the portion of the total cost allocated to the good; or
- (c) reasonably allocate each cost that forms part of the total cost incurred with respect to the good so that the aggregate of these costs does not include any sales promotion, marketing, and after-sales service costs, royalties, shipping and packing costs, and non-allowable interest costs, provided that the allocation of all those costs is consistent with the provisions regarding the reasonable allocation of costs set out in the Uniform Regulations.

Article 4.6: Value of Materials Used in Production

Each Party shall provide that, for the purposes of this Chapter, the value of a material is:

- (a) for a material imported by the producer of the good, the transaction value of the material at the time of importation, including the costs incurred in the international shipment of the material;
- (b) for a material acquired in the territory where the good is produced:
 - (i) the price paid or payable by the producer in the Party where the producer is located,
 - (ii) the value as determined for an imported material in subparagraph (a), or
 - (iii) the earliest ascertainable price paid or payable in the territory of the Party;or
- (c) for a material that is self-produced:
 - (i) all the costs incurred in the production of the material, which includes general expenses, and

(ii) an amount equivalent to the profit added in the normal course of trade, or equal to the profit that is usually reflected in the sale of goods of the same class or kind as the self-produced material that is being valued.

Article 4.7: Further Adjustments to the Value of Materials

1. Each Party shall provide that for a non-originating material or material of undetermined origin, the following expenses may be deducted from the value of the material:
 - (a) the costs of freight, insurance, packing, and all other costs incurred in transporting the material to the location of the producer of the good;
 - (b) duties, taxes, and customs brokerage fees on the material paid in the territory of one or more of the Parties, other than duties and taxes that are waived, refunded, refundable, or otherwise recoverable, which include credit against duty or tax paid or payable; and
 - (c) the cost of waste and spoilage resulting from the use of the material in the production of the good, less the value of reusable scrap or by-product.
2. If the cost or expense listed in paragraph 1 is unknown or documentary evidence of the amount of the adjustment is not available, then no adjustment is allowed for that particular cost.

Article 4.8: Intermediate Materials

Each Party shall provide that any self-produced material, other than a component identified in Table G of the Appendix to Annex 4-B (Product-Specific Rules of Origin), that is used in the production of a good may be designated by the producer of the good as an intermediate material for the purpose of calculating the regional value content of the good under paragraph 2 or 3 of Article 4.5 (Regional Value Content), provided that if the intermediate material is subject to a regional value content requirement, no other self-produced material subject to a regional value content requirement used in the production of that intermediate material may itself be designated by the producer as an intermediate material.

Article 4.9: Indirect Materials

An indirect material shall be considered to be an originating material without regard to where it is produced.

Article 4.10: Automotive Goods

The Appendix to Annex 4-B (Product-Specific Rules of Origin) includes additional provisions that apply to automotive goods.

Article 4.11: Accumulation

1. Each Party shall provide that a good is originating if the good is produced in the territory of one or more of the Parties by one or more producers, provided that the

good satisfies the requirements of Article 4.2 (Originating Goods) and all other applicable requirements in this Chapter.

2. Each Party shall provide that an originating good or material of one or more of the Parties is considered as originating in the territory of another Party when used as a material in the production of a good in the territory of another Party.
3. Each Party shall provide that production undertaken on a non-originating material in the territory of one or more of the Parties may contribute toward the originating status of a good, regardless of whether that production was sufficient to confer originating status to the material itself.

Article 4.12: *De Minimis*

1. Except as provided in Annex 4-A (Exceptions to Article 4.12 (*De Minimis*)), each Party shall provide that a good is an originating good if the value of all non-originating materials used in the production of the good that do not undergo an applicable change in tariff classification set out in Annex 4-B (Product- Specific Rules of Origin) is not more than 10 percent:

(a) of the transaction value of the good adjusted to exclude any costs incurred in the international shipment of the good; or

(b) of the total cost of the good,

provided that the good satisfies all other applicable requirements of this Chapter.

2. If a good described in paragraph 1 is also subject to a regional value content requirement, the value of those non-originating materials shall be included in the value of non-originating materials for the applicable regional value content requirement.
3. A good that is otherwise subject to a regional value content requirement shall not be required to satisfy the requirement if the value of all non-originating materials used in the production of the good is not more than 10 percent of the transaction value of the good, adjusted to exclude any costs incurred in the international shipment of the good, or the total cost of the good, provided that the good satisfies all other applicable requirements of this Chapter.
4. With respect to a textile or apparel good, Articles 6.1.2 and 6.1.3 (Rules of Origin and

Related Matters) apply in place of paragraph 1.

Article 4.13: Fungible Goods and Materials

1. Each Party shall provide that a fungible material or good is originating if:

(a) when originating and non-originating fungible materials are used in the production of a good, the determination of whether the materials are originating is made on the basis of an inventory management method recognized in the Generally Accepted Accounting Principles of, or otherwise accepted by, the Party in which the production is performed; or

(b) when originating and non-originating fungible goods are commingled and exported in the same form, the determination of whether the goods are originating is made on the

basis of an inventory management method recognized in the Generally Accepted Accounting Principles of, or otherwise accepted by, the Party from which the good is exported.

2. The inventory management method selected under paragraph 1 must be used throughout the fiscal year of the producer or the person that selected the inventory management method.
3. For greater certainty, an importer may claim that a fungible material or good is originating if the importer, producer, or exporter has physically segregated each fungible material or good as to allow their specific identification.

Article 4.14: Accessories, Spare Parts, Tools, or Instructional or Other Information

Materials

1. Each Party shall provide that:
 - (a) in determining whether a good is wholly obtained, or satisfies a process or change in tariff classification requirement as set out in Annex 4-B (Product-Specific Rules of Origin), accessories, spare parts, tools, or instructional or other information materials as described in paragraph 3, are to be disregarded; and
 - (b) in determining whether a good meets a regional value content requirement, the value of the accessories, spare parts, tools, or instructional or other information materials, as described in paragraph 3, are to be taken into account as originating or non-originating materials, as the case may be, in calculating the regional value content of the good.
2. Each Party shall provide that a good's accessories, spare parts, tools, or instructional or other information materials, as described in paragraph 3, have the originating status of the good with which they are delivered.
3. For the purposes of this Article, accessories, spare parts, tools, or instructional or other information materials are covered when:
 - (a) the accessories, spare parts, tools, or instructional or other information materials are classified with, delivered with, but not invoiced separately from the good; and
 - (b) the types, quantities, and value of the accessories, spare parts, tools, or instructional or other information materials are customary for that good.

Article 4.15: Packaging Materials and Containers for Retail Sale

1. Each Party shall provide that packaging materials and containers in which a good is packaged for retail sale, if classified with the good, are disregarded in determining whether all the non-originating materials used in the production of the good have satisfied the applicable process or change in tariff classification requirement set out in Annex 4-B (Product-Specific Rules of Origin) or whether the good is wholly obtained or produced.
2. Each Party shall provide that if a good is subject to a regional value content requirement, the value of the packaging materials and containers in which the good is packaged for retail sale, if classified with the good, are taken into account as

originating or non-originating, as the case may be, in calculating the regional value content of the good.

Article 4.16: Packing Materials and Containers for Shipment

Each Party shall provide that packing materials and containers for shipment are disregarded in determining whether a good is originating.

Article 4.17: Sets of Goods, Kits or Composite Goods

1. Except as provided in Annex 4-B (Product-Specific Rules of Origin), each Party shall provide that for a set classified as a result of the application of rule 3 of the General Rules for the Interpretation of the Harmonized System, the set is originating only if each good in the set is originating and both the set and the goods meet the other applicable requirements of this Chapter.
2. Notwithstanding paragraph 1, for a set classified as a result of the application of rule 3 of the General Rules for the Interpretation of the Harmonized System, the set is originating if the value of all the non-originating goods in the set does not exceed 10 percent of the value of the set.
3. For the purposes of paragraph 2, the value of the non-originating goods in the set and the value of the set shall be calculated in the same manner as the value of non-originating materials and the value of the good.
4. With respect to a textile or apparel good, Articles 6.1.4 and 6.1.5 (Rules of Origin and

Related Matters) apply in place of paragraph 1.

Article 4.18: Transit and Transshipment

1. Each Party shall provide that an originating good retains its originating status if the good has been transported to the importing Party without passing through the territory of a non-Party.
2. Each Party shall provide that if an originating good is transported outside the territories of the Parties, the good retains its originating status if the good:
 - (a) remains under customs control in the territory of a non-Party; and
 - (b) does not undergo an operation outside the territories of the Parties other than: unloading; reloading; separation from a bulk shipment; storing; labeling or marking required by the importing Party; or any other operation necessary to preserve it in good condition or to transport the good to the territory of the importing Party.

Article 4.19: Non-Qualifying Operations

Each Party shall provide that a good shall not be considered to be an originating good merely by reason of:

- (a) mere dilution with water or another substance that does not materially alter the characteristics of the good; or

(b) a production or pricing practice in respect of which it may be demonstrated, on the basis of a preponderance of evidence, that the object was to circumvent this Chapter.

Chapter 27 Mineral Fuels, Mineral Oils and Products of Their Distillation; Bituminous Substances; Mineral Waxes

Note 1: Notwithstanding the applicable product-specific rules of origin, a good of chapter 27 that is the product of a chemical reaction is an originating good if the chemical reaction occurred in the territory of one or more of the Parties.

For the purposes of this rule, a “chemical reaction” is a process (including a biochemical process) that results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of atoms in a molecule.

The following are not chemical reactions:

- (a) dissolving in water or other solvents;
- (b) the elimination of solvents, including solvent water; or
- (c) the addition or elimination of water of crystallisation.

Note 2: For the purposes of heading 27.10, the following processes confer origin:

(a) Atmospheric distillation: A separation process in which petroleum oils are converted, in a distillation tower, into fractions according to boiling point and the vapor then condensed into different liquefied fractions. Liquefied petroleum gas, naphtha, gasoline, kerosene, diesel/heating oil, light gas oils, and lubricating oil are produced from petroleum distillation;

(b) Vacuum distillation: Distillation at a pressure below atmospheric but not so low that it would be classed as molecular distillation. Vacuum distillation is useful for distilling high-boiling and heat-sensitive materials such as heavy distillates in petroleum oils to produce light to heavy vacuum gas oils and residuum. In some refineries gas oils may be further processed into lubricating oils;

(c) Catalytic hydroprocessing: The cracking or treating of petroleum oils with hydrogen at high temperature and under pressure, in the presence of special catalysts. Catalytic hydroprocessing includes hydrocracking and hydrotreating;

(d) Reforming (catalytic reforming): The rearrangement of molecules in a naphtha boiling range material to form higher octane aromatics (*i.e.*, improved antiknock quality at the expense of gasoline yield). A main product is catalytic reformate, a blend component for gasoline. Hydrogen is another by-product;

(e) Alkylation: A process whereby a high-octane blending component for gasolines is derived from catalytic combination of an isoparaffin and an olefin;

(f) Cracking: A refining process involving decomposition and molecular recombination of organic compounds, especially hydrocarbons obtained by means of heat, to form molecules suitable for motor fuels, monomers, petrochemicals, etc.;

(i) Thermal cracking: Exposes the distillate to temperatures of approximately 540-650C (1000-1200F) for varying periods

of time. Process produces modest yields of gasoline and higher yields of residual products for fuel oil blending, or

(ii) Catalytic cracking: Hydrocarbon vapors are passed at approximately 400C (750F) over a metallic catalyst (e.g., silica-alumina or platinum); the complex recombinations (alkylation, polymerization, isomerization, etc.) occur within seconds to yield high-octane gasoline. Process yields less residual oils and light gases than thermal cracking;

(g) Coking: A thermal cracking process for the conversion of heavy low grade products, such as reduced crude, straight run pitch, cracked tars, and shale oil into solid coke (carbon) and lower boiling hydrocarbon products which are suitable as feed for other refinery units for conversion into lighter products; and

(h) Isomerization: The refinery process of converting petroleum compounds into their isomers.

Note 3: For the purposes of heading 27.10, “direct blending” is a refinery process whereby various petroleum streams from processing units and petroleum components from holding/storage tanks combine to create a finished product, with pre-determined

parameters, classified under heading 27.10, provided that the non-originating material constitutes no more than 25 percent by volume of the good.

Note 4: For the purposes of determining whether or not a good of heading 27.09 is an originating good, the origin of diluent of heading 27.09 or 27.10 that is used to facilitate the transportation between Parties of crude petroleum oils and crude oils obtained from bituminous minerals of heading 27.09 is disregarded, provided that the diluent constitutes no more than 40 percent by volume of the good.

Rule 2: Purification Rule

A good of Chapter 28 through 38, except for a good of heading 33.01 or subheading 3502.11 through 3502.19, that is subject to purification is an originating good, provided that the purification occurs in the territory of one or more of the Parties and results in the following:

- (a) the elimination of not less than 80 percent of the content of existing impurities; or
- (b) the reduction or elimination of impurities resulting in a good suitable for one or more of the following:
 - (i) as a pharmaceutical, medical, cosmetic, veterinary, or food grade substance,

Rule 4: Change in Particle Size Rule

A good of Chapter 28 through 38, except for a good of Chapter 28, 29, 32, or 38, heading 33.01, or subheading 3502.11 through 3502.19, is an originating good if the deliberate and controlled modification in particle size of a good, including micronizing by dissolving a polymer and subsequent precipitation, other than by merely crushing or pressing, occurs in the territory of one or more of the Parties, resulting in a good with a defined particle size, defined particle size distribution, or defined surface area, that is relevant to the purposes of the resulting good, and having essential physical or chemical characteristics different from the input materials.

Rule 5: Standards Materials Rule

A standards material of Chapter 28 through 38, except for a good of heading 33.01, or subheading

3502.11 through 3502.19 is an originating good if it is produced in the territory of one or more of the Parties.

Rule 7: Separation Prohibition Rule

A good of Chapter 28 through 38, except for a good of heading 33.01, or subheading 3502.11 through 3502.19, that undergoes a change from one classification to another in the territory of one or more of the Parties as a result of the separation of one or more materials from a man-made mixture, shall not be treated as an originating good unless the isolated material underwent a chemical reaction in the territory of one or more of the Parties.

Rule 8: Biotechnological Processes Rule

A good of Chapter 28 through 38, except for a good of heading 29.30 through 29.42, Chapter 30, heading 33.01, or subheading 3502.11 through 3502.19, is an originating good if it undergoes a biochemical process or one or more of the following processes:

(b) for high-wage technology expenditures, the annual vehicle producer expenditures

⁷⁵ High-wage transportation or related costs for shipping a part or component may be used to calculate high-wage material and manufacturing costs if those costs are not otherwise included in the APV.

⁷⁶ These parts or materials include parts or materials used in the production of a vehicle or in the production of an auto part or material that is used in the production of an intermediate or self-produced part that is used in the production of a vehicle.

⁷⁷ The production wage rate is the average hourly base wage rate, not including benefits, of employees directly involved in the production of the part or component used to calculate the LVC, and does not include salaries of management, R&D, engineering, or other workers who are not involved in the direct production of the parts or in the operation of production lines.

⁷⁸ High wage material and manufacturing expenses can also be calculated by taking the Annual Purchase Value of purchased parts of materials produced in a plant or facility located in the territories of the Parties with a production wage rate that is at least US\$16/hour as a percentage of total vehicle plant assembly APV.

4-B-1-27

in North America on wages for research and development (R&D)⁷⁹ or information technology (IT)⁸⁰ as a percentage of total annual vehicle producer expenditures on production wages in North America; and

79 R&D expenditures include expenditures on research and development including prototype development, design, engineering, testing, or certifying operations.

80 IT expenditures include expenditures on software development, technology integration, vehicle communications, and information technology support operations.

81 In the case of a passenger vehicle or light truck, a high wage engine assembly or transmission assembly plant must have a production capacity of at least 100,000 originating engines or transmissions and an advanced battery assembly plant must have a production capacity of at least 25,000 originating assembled advanced battery packs, in order to receive this credit. In the case of a heavy truck, a high-wage engine, transmission, or battery assembly plant must have a production capacity of at least 20,000 originating engines, transmissions, or assembled advanced battery packs to receive this credit. Engines, transmissions, or advanced battery packs need not separately qualify as originating in order to meet this requirement.

4-B-1-28

An LVC calculation based on the producer's previous fiscal year is valid for the duration of the producer's current fiscal year.

An LVC calculation based on the previous calendar year is valid for the duration of the current calendar year.

6. Each Party shall provide that for the period ending January 1, 2027 or seven years after entry into force of this Agreement, whichever is later, if a vehicle producer certifies a Labor Value Content for a heavy truck that is higher than 45 percent by increasing the amount of high wage material and manufacturing expenditures above 30 percentage points, the producer may use the points above 30 percentage points as a credit towards the regional value content percentages under Article 4.1 of this Appendix, provided that the regional value content percentage is not below 60 percent.
7. The Parties shall include any additional certification or verification provisions for this

Article in the Uniform Regulations.

Upon request of one of the Parties, the Parties shall discuss and agree on any appropriate extensions or other modifications to the alternative staging regime described in paragraphs 1 through 4 if the Parties consider that such an extension or modification would result in new investment for vehicle or parts production in the territories of the Parties.

83 During this transition period, the rule of origin for a battery of subheading 8507.60 will be: "A change to a battery of subheading 8507.60, of a kind used as the primary source of electrical power for the propulsion of an electric passenger vehicle or light truck, from within that subheading or from any other subheading.

4-B-1-30
